

Fund Goal:

The Davidson Multi-Cap Equity Fund seeks long term capital appreciation by maximizing risk-adjusted returns.

Fund Focus:

Be Flexible. The portfolio is unconstrained by market capitalization and style, and is adjusted based on potential market opportunities.

Be Different. Managers take active industry and stock positions based on company fundamentals, challenging conventional market wisdom.

Be Disciplined. The portfolio is diversified by economic sector and fully invested, with position sizes commensurate with risk.

Fund Management:

Davidson Investment Advisors, serving the investment management needs of institutions, foundations, corporations, affluent investors, and trusts for more than 47 years, has a reputation for having a disciplined investment approach away from the noise of Wall Street.

Important Disclosures

The fund's investment objectives, risks, charges and expenses must be considered carefully before investing. The statutory and summary prospectuses contains this and other important information about the fund and may be obtained by calling The Davidson Funds at 877-332-0529. Please read it carefully before investing.

Diversification does not guarantee a profit or protect from loss in a declining market.

Mutual fund investing involves risk. Principal loss is possible. Small- and Medium-capitalization companies tend to have limited liquidity and greater price volatility than large-capitalization companies. The Fund invests in foreign securities which involve greater volatility and political, economic and currency risks and differences in accounting methods. These risks are enhanced in emerging markets.

Because the fund may invest in ETFs, it is subject to additional risks that do not apply to conventional mutual funds, including the risks that the market price of an ETF's shares may trade at a discount to its net asset value ("NAV"), an active secondary trading market may not develop or be maintained, or trading may be halted by the exchange in which they trade, which may impact a fund's ability to sell its shares. The fund will bear its share of the fees and expenses of the underlying funds. Shareholders will pay higher expenses than would be the case if making direct investments in the underlying ETFs.

The fund may also use options and future contracts, which have the risks of unlimited losses of the underlying holdings due to unanticipated market movements and failure to correctly predict the direction of securities prices, interest rates and currency exchange rates. The investment in options is not suitable for all investors.

The S&P Composite 1500® combines three leading indices, the S&P 500®, the S&P MidCap 400®, and the S&P SmallCap 600® to cover approximately 90% of the U.S. market capitalization. It is designed for investors seeking to replicate the performance of the U.S. equity market or benchmark against a representative universe of tradable stocks. One cannot invest directly in an index.
